

Sustainable **development**

As a company focused on acting in harmony with nature, we attach great importance to issues related to environmental protection.

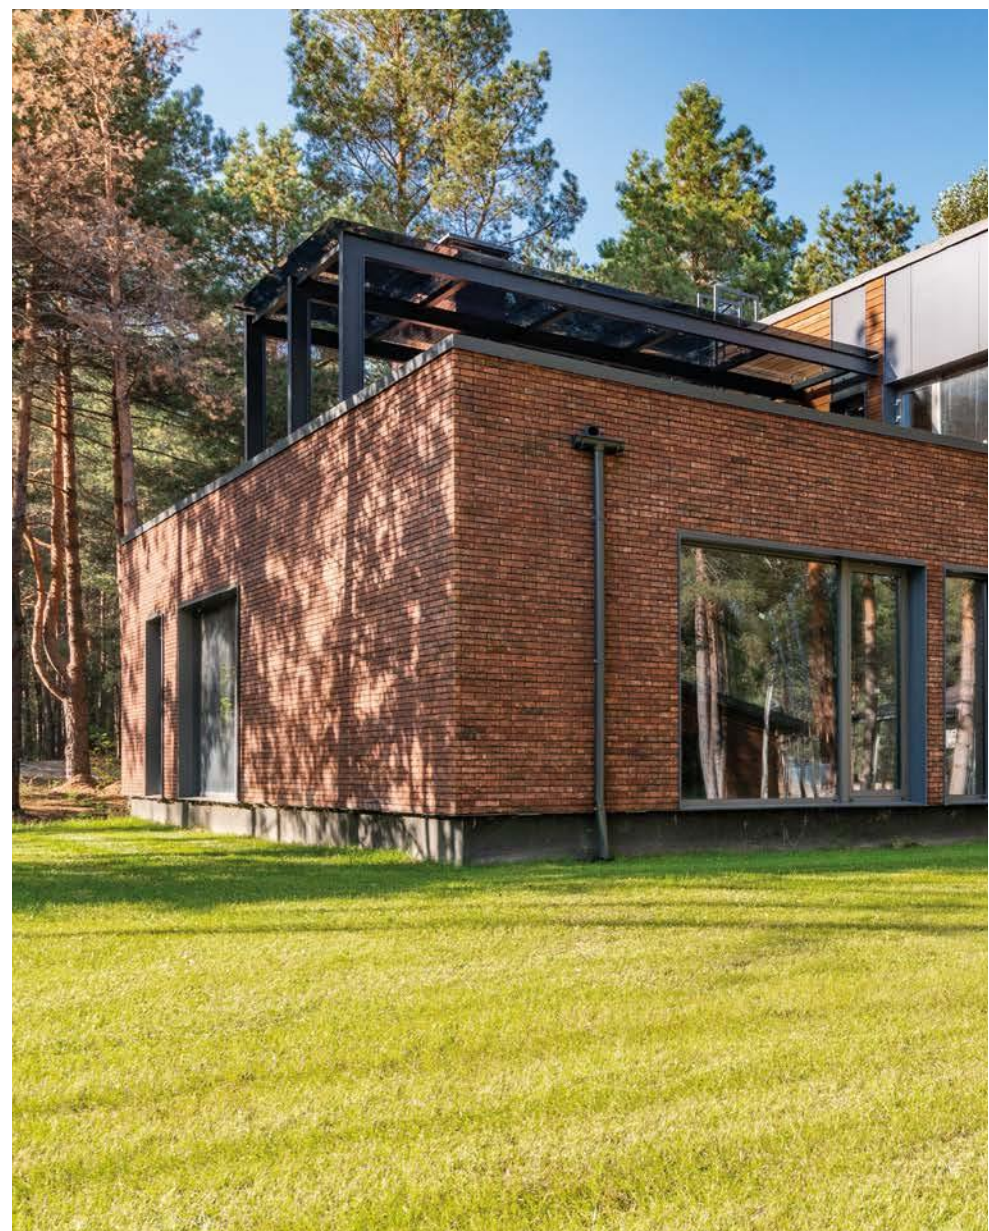

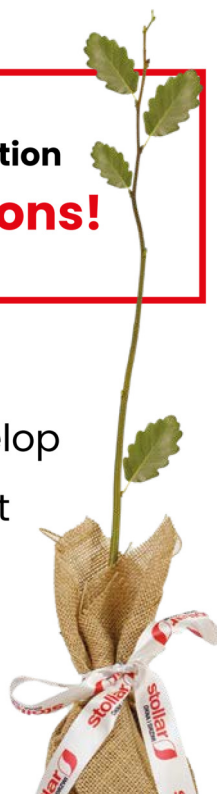

We invest in environmentally friendly solutions.

We actively participate in the recycling of PVC window and door profiles.

Only in 2020 we contributed to the **reduction** of CO₂ emissions by as much as **744 tons!**

However, we do not stop there and we develop our offer so that you can have a real impact on environmental protection.

The magic is in simplicity

More precisely, within the simple, expressive contours of our new **Q4 LINE** system. They give the structure a contemporary charm.

The low folding height of the frame

Main advantages:

- protection of natural resources – profile core made of recycled material
- system adapted to the construction of windows, entrance doors and balcony doors
- straight contours from the outer and inner sides of the window

recycled profile core

excellent static

5 chambers in the sash

slim profiles

It's good everywhere, but home is **warmest**

The Q4 LINE system provides very good thermal insulation properties. 6 chambers in the frame and 5 chambers in the sash have a positive effect on thermal insulation and a special middle gasket provides an effective blockage for the heat flow.

The system
The possibility of finishing
