

STOLLAR LIV LINE

Smart security and unique design in Premium Windows

STOLLAR LIV LINE

LIV LINE is a perfect window composition.

Our 20 years of experience and advanced engineering work made us develop an unrivaled product. **Liv Line** was created based on the legendary German Schüco system and includes everything that is beautiful, functional and safe that premium type of windows should have as a standard.

Available in two options as standard to choose from:

1. V-perfect weld
2. Titan RC1N fitting
3. SecuForte handle
4. black warm edge spacer bar*
5. iUpper System

1. V-perfect weld
2. Titan RC1N fitting*
(full PN EN 1627 certification)
3. SecuForte handle
4. black warm edge spacer bar
5. iUpper System
6. iMagnetic System*

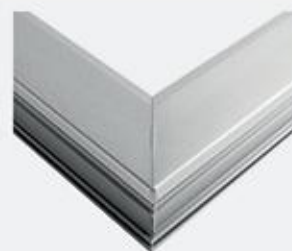

V-PERFECT weld

Unique and stylish technology of welding in PVC Windows/profiles.

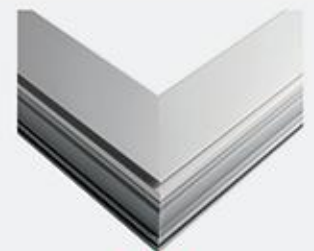

Liv Line windows perfectly fit into the composition of your home, at the same time becoming an element of interior design, and not a building material only.

Unique technology V-PERFECT

Safety as standard

A safe home is a solution without compromises, and when designing **Liv Line**, it was one of the core values for our engineers. **Liv Line** uses the best and the richest variety reliable Siegenia Titan fitting, compliant with RC 1 and RC 2 classes.*

What do you gain with LIV LINE window fittings?

- RC 1 or RC 2 - fully certified window frames confirmed with EN 1627 standard by the German institute
- Kopeck roller - the only smart roller on the market
- iUpper system protecting against the so-called "sash hanging effect"
- iHidden Hinge allows you to work with a sash weighing up to 180 kg*

Thanks to all these solutions, **Liv Line** windows work with the lightness of a feather. The sash, even the heaviest one, can be opened with a strength of a single finger. Be safe in a smart way and start Liv-ing safely.

New window handle technology

SecuForte® is one of the safest handles on the market, because the handle and spindle are not connected to each other, which provides additional anti-burglary properties. Thanks to such a solution, any potential "uninvited guest" will very quickly resign from entering your home.

TO OPEN THE WINDOW,
PRESS THE HANDLE
IN THE DIRECTION OF THE
ROSETTE 1, THEN ROTATE 2.

Warm edge spacer bars

As a standard, you get a warm edge spacer bar*. The window equipped with it looks aesthetically pleasing and has much better thermal properties. In addition, the warm frame neutralizes the effect of the so-called "water condensation/fogging up".

Be safe in a smart way

iMagnetic contains a magnetic detector system that makes the window an integral part of a secure home managed by a central security system. The system works with all modern Smart Home solutions.

Unique Schüco AutomotiveFinish veneer

Let the design of your interior become unique with a special AutomotiveFinish veneer.

That's why you will love Liv Line even more:

- Exclusive metalized colors
- Unique color juiciness
- Colorful and perfectly matched to the interior of the house and the facade
- Very high resistance to abrasion
- Extreme resistance to weather conditions

You can finally match the color of your windows to the interior of your home and make it one of its kind. Express yourself and your own style with a unique interior. Use AutomotiveFinish and start Liv-ing without restrictions.

This material does not constitute a commercial offer within the meaning of art.66 of the Civil Code.

*iMagnetic – optional equipment, which in the indicated composition is covered by a discount.

*Black warm edge spacer bar – applies to black edge spacer bar as standard.

*RC2N – a handle with a key is required to meet the PN EN 16 27 standard.

*RC1 i RC2 – to meet the RC1 and RC2 standard, it is necessary to use burglar-resistant glass compliant with the standard.

*iHidden Hinge – applies to Siegenia Tytan hidden hinges in RC1 and RC2 version.
